

## GREEN LINE PORTFOLIO

### PRIVATE INVESTMENT IN SOLAR

The successful installation of this project demonstrated how private investment can work in the commercial solar industry. Our use of creative financing was vital to the success of the project due to our ability to offer customers a ‘no money up front’ option with attractive net benefits from day one and substantial electricity savings for 25 years. These benefits helped IPS secure contracts with the four building owners along the EIC.

Kilowatt hours per year

Impact Power Solutions has turned a corridor along the Green Line into an even greener line. Spread over 4 commercial rooftops, the Green Line solar project is within the Energy Innovation Corridor, an initiative promoting sustainable energy and transportation. “This urban corridor now boasts one of the densest and most diverse concentrations of renewable energy, advanced energy efficiency programs, electric transportation and smart energy technologies in the region.”

*“In short, we have accomplished something exceptional.” -St. Paul Mayor, Chris Coleman.*
